EXPERIENCE

UDLAP

Puebla, México

Mobile Development Lead

Aug 2025 - present

- Led mobile development for a university security system, establishing software architecture (MVVM), navigation patterns, and coding standards to ensure a robust, secure, and highly maintainable application.
- Developed iOS application with biometric authentication, dynamic QR access control, and real-time push notifications.
- Coordinated Android team, ensuring feature parity and designing shared API endpoints with the backend.

Halliburton - Landmark Software & Services

Villahermosa, México

Web Developer Intern (Professional Practices)

July 2024- Dec 2024

- Developed interactive dashboards using Angular, enabling the monitoring and analysis of downtime for strategic decision-making.
- Worked using agile methodologies to deliver scalable software solutions aimed at reducing operating costs.

COMPETITIONS

ENACTUS Changemakers Hackathon 2025

May 2025

- Developed the "STEMify" app in Swift for iOS: an inclusive solution that guides undecided young people towards STEM careers through guided curiosity, gamification and inspiration in role models; recognized with the second place in the challenge for the best solution proposed by the company Bosch.
- Scalable educational architecture: Implemented geolocation with CoreLocation and MapKit, university web scraping, integration with Firestore and customized flows; highlighted for its social impact, accessibility and UX approach focused on vocational exploration.

ENACTUS Changemakers Social Challenge 2024

Nov 2024

- Developed a Swift-Based iOS App: Led the creation of "Cultivo Sano", an app designed to empower rural communities by leveraging artificial vision for early plant disease detection, effectively bridging the knowledge gap. The project aligned with United Nations SDG and earned third place in the challenge.
- Boosted Diagnostic Efficiency: Trained a robust detection model using over 10,000 plant images, achieving an 87% detection accuracy and reducing diagnosis time by 60% compared to traditional methods.

PROYECTS

Pacto: Smart Contract Management with Blockchain

May 2025

- Developed a web platform (Angular + Solidity/Sepolia) for creating and signing smart contracts using MetaMask, ethers.js, and Firestore, reducing the workflow time by 50% compared to traditional methods.

Mobile Academic Management

April 2025

- Developed an Android app for academic management that uses QR code scanning for attendance tracking, course management, and grade tracking, automating the process and reducing manual processing time by 70%.

Smart Temperature Monitoring with IoT

December 2025

- I implemented a system using an ESP32 and an MLX90614 for real-time monitoring of chocolate, automatic WhatsApp alerts (via Twilio), and visualization via InfluxDB/Grafana, reducing manual supervision by 80% and downtime due to overheating by 35%.

Support application for oncology patients

September 2024

- Led the creation of a cross-platform mobile app with Dart, offering personalized emotional support to oncology patients through an AI-powered chatbot.
Chosen to be part of medical student thesis.

EDUCATION

Universidad de las Américas Puebla (UDLAP)

México

Bachelor's Degree in Computer Systems Engineering

Graduated: June 2025

Cumulative GPA: 3.8

Relevant Coursework: Mobile application development - Software engineering - Artificial Intelligence - UX - HCI - Machine Learning

Artificial Vision - Advanced Databases

TECHNICAL SKILLS

Programming languages: Swift, Kotlin, Python, Angular, JavaScript, C++, SQL.

Tools: Xcode, Visual Studio Code, Visual Studio Community, Git/GitHub, Arduino IDE, Excel.

Languages: Spanish (native), English (fluent), German (basic)
